

Abstract of the Disclosure

Active energy beam-curable compositions which

5 comprise (1) at least one compound having one oxetane ring and one hydroxyl group in the molecule, (2) at least one compound having one or more oxirane rings in the molecule and (3) at least one compound which initiates cathionic polymerization by irradiation of active energy beams, are provided. The

10 compositions can be rapidly cured by irradiation of active energy beams, such as ultraviolet rays and electron beams, to give excellent adhesion to basic materials.
